Educational Rose Rosette Door Hangers

www.collincountryrosesociety.org

Our Rose Rosette Educational Door Hangers are available for groups and individuals that want to help in the battle to eradicate Rose Rosette Disease (RRD) by educating the public to the danger of RRD. The Door Hanger tells the whole story about RRD in a quick and concise manner. These small Door Hangers are best used as conversation starters to tell people about RRD, but can simply be left on a door knob or hung on an infected plant.

The Door Hangers are 8.5" x 3.5" x .015" thick UV resistant plastic coated card stock. The Standard CCRS Door Hangers are available in both English and Spanish versions:

STANDARD CCRS DOOR HANGERS

Any Quantity - **\$0.20 each**, plus S&H

Specify English and/or Spanish – may be mixed)

Shipping by USPS to anywhere in USA

CUSTOM INDIVIDUALIZED DOOR HANGERS

(Please Specify English or Spanish version)

CCRS will furnish camera ready PDF artwork for custom, Individualized Door Hangers with the name and logo of your organization that you can print yourself. We will furnish you with the contact information for our printer, or you can use any printer of your choice.

There will be a one-time **\$75.00** fee for creating the customized artwork. The fee will include the rights from CCRS for your organization to reproduce the furnished artwork under our copyright for the exclusive use of your organization. The words "created by: www.collincountryrosesociety.org" will appear in small print at the bottom on one side and the CCRS copyright remains in the upper left corner on both sides.

Please submit name or logo to be printed on the Door Hanger. A high resolution, 300dpi version of your logo will be required. We also will need your text to replace the paragraph **on the back** under the heading "Please Help Save the Roses" .

Please Help Save the Roses

The Collin County Rose Society is partnering with Texas Agrilife Extension, Master Gardeners, Other Rose and Garden Societies, Nurseries and Landscape Professionals to raise public awareness of this deadly viral disease destroying roses in the Greater Dallas / Ft Worth Metroplex.

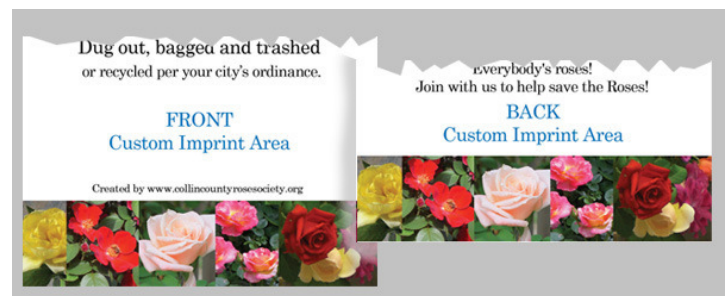

Rose Rosette Disease (RRD) is a virus transmitted by a tiny invisible mite. The virus disrupts the DNA of new growth on roses and causes the ugly mutant growth as shown in the photos. The virus spreads throughout the plant and WILL KILL the rose plant eventually, BUT not just that rose plant. The tiny mites from infected plants are blown by the wind onto your other roses, your neighbor's roses, the municipal garden's and city park's roses...
Everybody's roses!
Join with us to help save the Roses!

Rose Rosette Virus is Killing Roses by the Thousands

Scientists and horticulturalists are diligently working to develop ways to cure, manage or prevent Rose Rosette Disease (RRD), but in the meantime there is only one known way to stop the spread of the disease:
INFECTED ROSE PLANTS MUST BE DESTROYED...
Dug out, bagged and trashed or recycled per your city's ordinance.
